and

weighting the summed accuracy score associated with each training set according to the frequency and then combining the weighted summed accuracy scores to yield scope-specific accuracy scores; applying weights to each of the scope-specific accuracy scores; summing the weighted scope-specific accuracy scores to yield a combined accuracy score; summing the combined accuracy score with at least one other summed accuracy score relating to a physical attribute of one or more input signals to yield an input accuracy score; and summing the input accuracy score with a summed accuracy score for a group of signal sets corresponding to the user scenario variable to yield an overall accuracy score
